- **Max 15 amps per zone**
- **Blue lights in box will blink briefly at initial power up**
- **Blue Lights will stay on continuously once digital communication is received from controller**
- **For best results, properly calculate wire gauge to minimize voltage drop to controller**
- **Physically separate RGB wire and audio feed signals**
- **Note, that in certain cases CAN wire colors will be different than orange and yellow**
- **Do not attempt to connect CAN signals with power connected as this can damage sensitive CAN communication electronics**
